Since its introduction, AutoCAD has become one of the most used applications on the computer industry. According to the research firm, Forrester, AutoCAD had annual revenues of US$1.6 billion in 2011. In 2012, Autodesk claimed that AutoCAD had revenues of US$2.08 billion and that it had surpassed 2.2 million registered users worldwide. AutoCAD is marketed as a cross-platform, desktop CAD application, capable of both 2D and 3D CAD work. In addition to its 2D features, AutoCAD offers functionality for creating and manipulating 2D and 3D drawings and modeling, 2D and 3D surface and solid modeling, and 2D and 3D assembly and fabrication documentation, along with network and mobile drawing features, and a variety of output options. The standard version of AutoCAD, as well as the premium version, is licensed per user. The system requirements of AutoCAD are very high. AutoCAD is not recommended for use on older, less powerful computers. The minimum system requirements include Microsoft Windows 3.x and Windows 7, Intel Pentium III and AMD Athlon, and 16-bit video card with OpenGL 1.3 driver. Most versions of AutoCAD are 32-bit and use the Microsoft's.NET framework 3.5. History AutoCAD (1983) was designed by James Brown, one of the four founders of AutoDesk, the company that developed AutoCAD. Brown had previously worked at General Electric, and conceived of the application while working on a desktop CAD program for the GE "5030" minicomputer. The first version of AutoCAD was released in December 1982, in a personal computer version, to a limited group of beta testers, by Autodesk, a small software development company that was founded by Brown and his three partners on December 6, 1979. Since then, Autodesk has evolved from a small software development company to a software development company that develops Autodesk products for a wide range of business and engineering markets. The company has grown substantially since 1983, and has been licensed to third-party firms such as Siemens PLM Software, HP, and Dassault Systemes. In 1995 Autodesk was one of the first companies to issue a financial statement on Internet, with public shares trading on the NASDAQ exchange. AutoCAD 2008, later renamed Autodesk
